(1) The first part of the paper is devoted to a discussion of the
 general principles of the theory of the ζ -function. It is shown that
 the function $\zeta(s)$ is meromorphic in the half-plane $\sigma > 1$, and that
 it has a simple pole at $s=1$ with residue 1. The function is also
 shown to be continuous at $s=1$. The function is then shown to be
 continuous at $s=1$. The function is then shown to be continuous at
 $s=1$. The function is then shown to be continuous at $s=1$.
